

# GroundReport

Historical Town Plans now included at no extra cost  
in GroundSure's Historical Map Pack

July 2008

These maps are Pre World War II Ordnance Survey County Series maps, produced from a survey of towns with a population of over 4,000. These maps provide highly detailed information including interior ground floor layout of public buildings, internal functions of the larger industrial premises and features of interest such as tree positions.

These Town Plans will provide even more detail, in addition to our excellent and high detail historical mapping.

The GroundSure Historical Town Plans were mapped at 1:2500,

1:1250, 1:1056 and 1:500 scales in colour and grayscale.

The historical maps are site centered and scanned at 508dpi, which is double the resolution of the current market offering. With such a high level of quality and accuracy, the features jump off the page making the assimilation of information easier and faster.

GroundSure supplies all Ordnance Survey mapping dates including published, survey, revision and copyright (where available) making subsequent analysis more accurate.

The GroundSure Historical Town Plans can also be supplied as geo-referenced data.
